

Use browser's back button to return to homework and handouts page.

Lab handout for homework due as announced in class.

1. Click on “Analyze” , “Regression” , “Linear”.
2. Move the variables of interest into the appropriate boxes (see below). Your choices are limited to ... interval ratio.

3. Click “ok”, and the output will be produced.
4. You should get an output window with the regression statistics in the right hand pane.
5. In the right hand pane, double click on the word regression in a box by itself.
6. Type in your name, then look in the left window pane of the output window.
7. SINGLE click on the word regression, making sure it and the section under it are highlighted.
8. Do file, print, while regression is highlighted, and you are done.
9. The single page is your homework due as announced in class.
